CIS 651 – Mobile Application Programming

Assignment #3

Due Date: 03/25/2022 (11:59 PM)

1. Create TMDB account for Movie List App

If you are using version 3, below are some helpful info for getting your movie list and poster. However, you are encouraged to use version 4 or above (with 10 bonus points), which uses bear token instead of API key to authenticate.

- You need to create an account for TMDB (https://www.themoviedb.org) and get your own API key (https://developers.themoviedb.org/3/getting-started).
- You can load movie data information with your API key with the following urls:
  Get Now Playing : http://api.themoviedb.org/3/movie/now_playing?api_key=<<api_key>>
  Get Popular : http://api.themoviedb.org/3/movie/popular?api_key=<<api_key>>
  Get Top Rated : http://api.themoviedb.org/3/movie/top_rated?api_key=<<api_key>>
  Get Upcoming : http://api.themoviedb.org/3/movie/upcoming?api_key=<<api_key>>

  If you API Key is: 33466375d8ada87b7db76d4ce6666906, the following are two example API Request:
  https://api.themoviedb.org/3/movie/550?api_key=33466375d8ada87b7db76d4ce6666906
  http://api.themoviedb.org/3/movie/now_playing?api_key=33466375d8ada87b7db76d4ce6666906

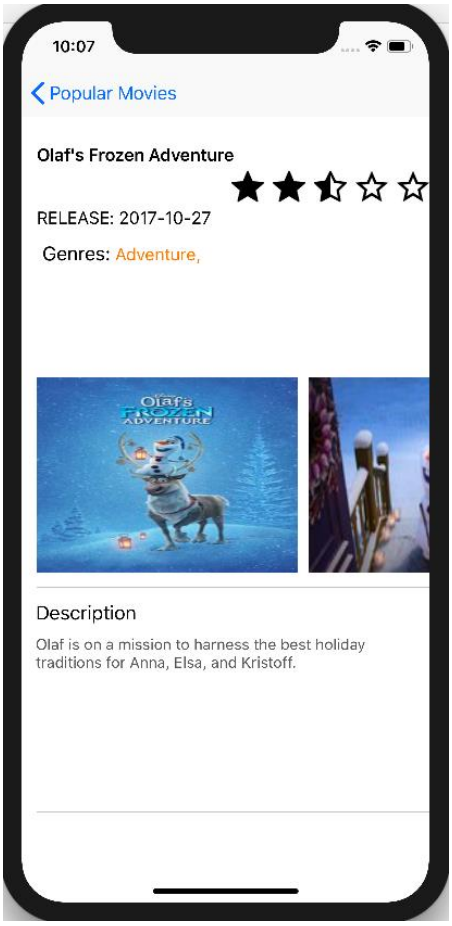

- Each movie entry has a field called “poster_path” or “”backdrop_path“, which is where you should download the picture for the movies.
  URI: http://image.tmdb.org/t/p/<<size>>/<<poster_path>>"; // size : "w92", "w154", "w185", "w342", "w500", "w780", or "original".

2. Create Movie List App

- Quality of Design
  Layout (Storyboard or in code)
  - in demo video, show both in iPhone 14 and iPhone 8 (iphone types flexible)
- Master/Detail flow
  - master view must be tableview
    - create your own custom cell
    - at least show small image of poster, title
    - fetch movie list from TMDB server through Json downloading
    - download image from the poster link
    - select a movie by tapping a row, then load detail view of your design.
    - delete a movie with swiping action
  - detail view
    - customize/design your detail view
      title, rating, description, ...

rating must be visual (not text)

- download movie detail from TMDB with id of Movie
- must show poster/backdrop images within a collection view and make swiping action
  download images from the server (NO local image)
  use 2 poster/backdrop images to manipulate >= 4 collectionview items

- MVC/MVVM design pattern!
  - define your model for fetching Movie Json data
    - movie list/movie detail
    - must be Decodable (No need to parse JSON data)

Deliverables

- Record your screen to show your code, storyboard, icon, and running app (show both orientations if applicable, and two devices)
- Submit video and zipped project folder containing the files of MovieList using Blackboard as follows.
  1) Log onto Blackboard.
  2) Click on Assignment 03.
  3) Browse and upload the desired file from your computer into Blackboard.

4) Submit the assignment.
